

NO MORE SAGGING DOORS

The PATENTED Kell Pressure Washer is revolutionary in the industry, resolving the issue of sagging doors that we've experienced in our field over the last few decades.

BETTER IN EVERY WAY

While eliminating the issue of sagging doors, The Kell pressure washer is also faster to assemble, stronger, long lasting and 30% more cost effective than traditional assembly methods for hinge doors.

CERTIFIED

The Kell pressure washer is certified to handle a load of 212KG. We've done a variety of stress tests to ensure our product can withstand more than we require, with additional products like our HD Bar to push the limits to over 350KG where needed.

LESS IS MORE

Our Unique Patented Design has been created to save you time and money by eliminating the use of a U Spigot and Angle.

**ADVANTAGES**

- Stronger
- 30 % more cost effective
- No U spigot
- No Angle
- Less drilling
- Alignment Jig available
- Bigger door capability
- Very fast assembly
- Longevity
- 1 size pressure washer for R7/R4/R6
- Less stock holding
- Upgradable with the HD Bar

NEW POSSIBILITIES

Our unique design allows the tension of the rod to be spread to the correct areas for optimal tension, securing the door assembly and spreading the tension through the sill walls. This allows you to tension the threaded rod right to the point where it almost snaps, this is not possible with the traditional door assembly method.

NO GOING BACK

212 Kg means the Kell Pressure washer can handle the weight of a 6.38 Double Glazed Jumbo Sheet, ensuring you won't ever have to go back to site to fix a sagging door.

BESPOKE

The Kell Pressure Washer is available in HD (Hinge Doors), SD (Sliding Doors) and MD (Medium Duty Roller) with the optional HD Bar compatible with all Kell Pressure Washers for door weight exceeding 212KG.
